Myonex US Headquarters & cGMP Warehouse  
Horsham, PA

Myonex is a leader in clinical trial supply solutions and opened its new US headquarters and cGMP Warehouse in a new 65,000 sf facility in Horsham, PA. The new facility features office areas, support areas as well as a temperature-controlled rooms for refrigerated (2-8C) and frozen (-20C) materials, DEA vault for DEA controlled substances, secondary labeling, and shell space for future expansion. The cGMP warehouse will be able to accommodate raw and finished materials as well as DEA controlled substances.

PrecisCx worked closely with the CM to assure the project schedule was maintained and all issues impacting the turnover of the areas were addressed and corrected in a timely manner.

PrecisCx documents were leveraged into the validation and qualification process and pre and post reviews were provided. The documents were completed using Good Document Practices and the turnover packages were completed and reviewed and approved by the owner's quality group.
